

PORTATION FEES OF THE NUMBER PORTING BETWEEN TELECOMMUNICATION COMPANIES

All number portings between telecommunications companies are set at prices in accordance with the instructions in this guide and based on either the **basic number porting hand over price list** or the **discount price list for number portings of corporate customers**.

The number portings of exceptionally large quantities of numbers to a big company or a public sector customer may be priced differently, however, if the telecommunications companies involved in the porting mutually agree among themselves.

The pricing structure and prices have been agreed between the telecommunications companies and approved by Traficom's numbering group. The price list is maintained and managed by Numpac. The pricing guide is available both on Numpac's website and on Numpac's Numsi portal. Telecommunications companies no longer have to publish their prices in their telecommunications companies' price lists.

Changes to the price list will be agreed in the future through commercial negotiations between telecommunications companies while Traficom will continue to monitor the overall operation of the market.

BASIC NUMBER HAND OVER PRICE LIST

These prices are used for all the number portings of consumer customers, all the portings of mobile numbers for corporate customers, and the basic portings of fixed numbers for corporate customers.

FTT	FVP	FTP	FVT	FYE	MOF	MOB
Local number	National service number	073 number	071 number	Corporate or special service number (0X0 / 075)	Mobile exchange number	Mobile number

280	80
320	100
360	360
400	400

Examples of the application of the price list

- 1) The hand over price of a three 10 number (B10) local number blocks is EUR 70
- 2) The hand over price of a four 10 number (B10) corporate or special service number blocks is 420 euros
- 3) The hand over price of four single (B1) national service numbers is 410 euros
- 4) The hand over price of four 100 number blocks (B100) and two 1000 number blocks (B1000) of local numbers is EUR 340 (= 180 + 160)
- 5) The hand over price of four 100 number (B100) and two 1000 number (B1000) corporate or special service number blocks is 940 euros (= 520 + 420)

USE OF DISCOUNT PRICE LIST FOR CORPORATE CUSTOMER NUMBER PORTINGS

The telecommunications company requesting the number porting may take advantage of the discounted price list when the number portings are made to a corporate customer with a company ID (Business ID or VAT ID). The discount price list can be used when number portings are requested at the same time and the numbers concern the same corporate customer.

The recipient (the telecom company receiving the numbers) **must use the H00 price in the port order, when the discount pricing is used.** The recipient calculates the direct price defined by the discount pricing and give the total sum for blocks and numbers in the port order as a H00 price.

If the amount of numbers to be ported (number of blocks) to the same corporate customer is large, the telecommunications company submitting the port order may create several port orders at the same time, and the numbers/blocks in all of these may be considered when calculating the hand over price. It is possible to present the hand over price only in one port order for all the discounted port orders of the same customer, in which case for all other port orders related to the discounted port order, the price should be marked as zero in the H00 field.

The donor accepts or rejects (for a valid reason) the discounted port order. If the donor approves the port order, the reduced hand over price is deemed to have been agreed.

The discount price list applies to local numbers, national service numbers and corporate or special service numbers. The 073 and 071 numbers are also classified as corporate or special service numbers. When calculating the discount price for local numbers, both the individual (FTT) subscriber numbers of the corporate customer and the (FTT) subscriber numbers of the exchange numbering range can be included in the discounted port order request.

The hand over price of the discounted port order consists of the hand over price of the first block, to which is added the number of additional blocks multiplied by the hand over price of the additional block.
